

Kaybob Area Incident Update: October 11, 2016

John Williams, Trilogy's President, and other members of Trilogy's management team were at the incident site today meeting with the response team to fully assess the extent of the spill and continue clean-up and response efforts.

- The pipeline has been shut-in and purged, which has contained the source of the leak.
- Based on preliminary delineation, the size of the spill is currently estimated to cover approximately three hectares of land. The volume of the spill has yet to be determined.
- The incident took place in a remote area and the response team now has access to most of the impacted area.
- Environmental specialists, wildlife experts and crews are on site assessing the situation, working closely with the Alberta Energy Regulator (AER). Sampling and monitoring, recovery, waste management and wildlife and water control plans have been developed and are pending AER approval.
- Trilogy continues to collect water and soil samples and conduct wetland and other environmental assessments to fully determine any potential impact on water bodies.
- Trilogy has developed a diversion plan that will minimize the infiltration of surface water and prevent further disbursement of the spill.
- Trilogy also continues to monitor and deter wildlife from accessing the site.
- Recovery and disposal of contaminated material has commenced.

Updates will be provided on Trilogy's website www.trilogyenergy.com.
